

# VERTEX

"Wasn't this always supposed to be simple?"

*Another quality Hills product*

# Keeping it simple...

## The VerteX Code Pad

These days, technology is changing faster than you can keep up with. Security systems are no different - the more they do, the more difficult they are to understand. And while you want the best technology your money can buy, you shouldn't have to puzzle over how to work it.

We have listened to you. That's why we're offering the VerteX code pad - keeping it as simple as we can so you are able to confidently use a technologically advanced security system.

## It's really easy to operate...

The 5 specialised keys perform the most common functions with one touch.

**ON:** When you are leaving your home, you need to turn the security system on. Just press this button & your security system is fully armed.

**PARTIAL:** Press this button to arm your system & automatically bypass selected interior motion sensors to allow freedom of movement within your home eg. Secure downstairs & stay upstairs

**EXIT:** Extend your exit time, when you need to go back inside after arming the system, but don't want to turn the system off & back on.

**BYPASS:** Temporarily turn off detection devices. Individual detectors can be turned off for flexibility eg. A guest room in use.

**CHIME:** Turn this feature on & off - when it is on, a ding-dong sound will let you know when an outer door or window has been opened.

## ...with a touch of style...

Not only is the VerteX easy to use, its also physically designed with you and your home in mind.

The flip lid means you can hide the keys. This means that accidental keypresses can be avoided. It also makes the code pad less obtrusive amongst your home decor. And it gives you the added convenience of providing a quick visual reference for the zone identification sticker, just in case you forget.
